

## Is it time for a Safety Check Up?

In any business safety not only needs to be in focus, it needs to be regularly checked on, to ensure that it is both working and to see if it can be done better. Now is a great time for you to have your Safety Check-up.

RRR Consulting s.r.o. provides expert support for our clients in safety. Bringing together experts with proven international success in their respective fields. We have developed innovative and proven processes to provide the best support available.

Our Safety Check-up is designed to take no more than half a day on site. **It results in identification of potentially unsafe conditions.**

The check-up will begin with us providing a short questionnaire asking for minimal 'big picture' information related to your safety process, which will only take a few minutes to complete.

Following that, we will agree the best possible time for a visit to your plant. The goal of the plant visit is to observe the operations, and to spend some time talking to key personnel about your safety systems and practices.

Following the Plant visit we will provide a professional findings report outlining the good things as well as any opportunities for improvement, and any potentially unsafe conditions.

The overall cost of the safety check-up starts at only 5,000 Kc. And includes the plant visit and findings report.

For more information about our safety consultancy, please visit our website; [www.rrrconsulting.eu](http://www.rrrconsulting.eu)

Or contact our International Safety Specialist to schedule your check-up.
